WHY WE LOVE IT...

# BATHING BEAUTY

Previously a study, this master bath becomes a place for relaxation instead of work.

**1 Color Play**  
Soothing hues of gray add to the serene surroundings in this bath retreat. Swirls of the color in the tile and countertop complement the clean lines of the solid-colored vanity.

**2 Smart Shelving**  
Storage can be beautiful, as evidenced in a sleek row of shelving to the left of the tub. Tucked into a corner, the shelves blend seamlessly into the decor and offer convenient access to towels and other necessities.

**3 Modern Art**  
The importance of artistic elements in a space should never be overlooked, even in a bathroom. A dramatic piece of art with an unexpected pop of color serves as the focal point of the wall. The interesting stump table combines good looks with functionality.

**4 Classic Style Meets Modern**  
Details make the difference, and in this case those details step out of the modern décor boundaries a bit. Traditional basketweave tile nicely complements sleek rectangular cuts of marble in the shower. By keeping the two styles in the same color family, they play well together.

**5 Separate Identities**  
What could be more luxurious in a master retreat than having a separate tub and shower? This spacious, box-shaped tub overlooks a garden of Japanese maples, adding to the zen-like serenity of this bath. The adjacent shower offers ample space as well, while taking advantage of the same window vista.
